

WEATHER

hvar island

Hvar Island is one of the **sunniest parts** of the central and northern Mediterranean. The sun shines for almost three thousand hours per year, with a daily average of **7.3 sunny hours**.

The temperature is fantastic through the summer season. The climate and the flow of warm sea currents makes the sea temperature in Stari Grad **wonderful for swimming** from early May through to the end of October.

Sea Temperature C					
may	june	jul	aug	sep	oct
16-20	19-23	21-25	25-24	24-22	23-19

The local winds "jugo" (south-east) and "bura" (north-east) can blow at times all year but mainly during the winter.

The Maestral blows in spring and summer. Because it is a sea wind, it is **refreshing**.

It hardly rains in Spring and Summer, and there are moderate rains in autumn and winter season. The driest months are July and August and the wettest November and December, but total rainfall is **only about 800 mm annually**.
